6 seats

IN THREE ROWS

The Eπ008 is Dongfeng's five-metre family SUV, with six seats in three rows and a middle row built for comfort. The Extended range always drives on electric power: a 1.5 litre turbo petrol engine only makes electricity, for 164 km on battery and 902 km in total (WLTP). A fully electric version, with an 82.28 kWh battery, has also been previewed outside China.

01

Room for the whole family

A five-metre SUV with a 3,025 mm wheelbase and six seats, including two individual middle-row seats with power adjustment, heating and ventilation.

02

Drives like an EV, with a backup

The petrol engine only makes electricity, so the car always drives like an EV: 164 km on battery alone and 902 km in total (WLTP).

03

A quiet range extender

Dongfeng says the range extender cuts in almost unnoticed, adding about 1 dB of noise when it runs while driving.

04

First-class middle row

Zero-gravity seats, a fold-out table and an intelligent cooling and warming box.

05

Big screen, big sound

A 15.6-inch centre screen and a 19-speaker WANOS Premium sound system.

06

Fast charging and power out

The Extended range charges from 30 to 80 percent on DC in 26 minutes, and a 220 V outlet powers tools or camping gear.

Comes as: Extended range · Electric

BODY	Six-seat large SUV, three rows
POWERTRAINS	Extended range (electric drive, 1.5 litre turbo petrol generator); or fully electric
